StarSoft Technologies, Inc. releases powerful new Point of Sale specialty module.

Ministries and Non-Profit customers to benefit from increased capability to generate revenue. Variety of features allows new fundraising opportunities.

Spokane, May 18, 2005 - StarSoft Technologies, Inc. today announced that it has released a powerful new specialty module called POSWorks which will allow non-profits using DonorWorks™ software to integrate Point of Sale activities into their development strategy. With POSWorks deployed as a "drop in" module, DonorWorks™ will be enabled to offer capabilities such as item sales, inventory tracking and re-order, subscriptions, rentals, hourly services, invoicing, tax and discounting, and reporting by departments and referral codes.

StarSoft president Scotte Meredith said "I'm excited about this new release of POSWorks for our clients. It provides one more tool for our clients to use to help fulfill their mission. Several current clients have been using a previous version or POSWorks daily for selling books, tapes and other inventory related to their missions. This extends their capabilities and makes it easier to use. We expect this year to be a breakout year for the company as we provide tools for non-profits and churches to use to advance their mission and develop deeper relationships with their constituents."

Today's release follows closely on the heels of the release of DonorWorks™ and ChurchWorks™ v7.1, which brought many significant new features to the programs. The next few months are expected to bring releases of a Client Intake module for organizations who serve clients in medical or counseling roles, a module to track planned gifts, adding event seating and ticketing to the program, a Grants module, integration with products from partners, and a SQL backend for improved database features.

About StarSoft - StarSoft builds cross platform Constituent Relationship Management (CRM) software for non-profits and churches of all sizes. DonorWorks™ and ChurchWorks™ software provides flexible and versatile tools to track complex and detailed information about members, donors, staff, and volunteers as well as people served or ministered to. Also allows tracking of events, groups, and giving along with receipting and flexible reporting. Churches and non-profits using this software find valuable time and resources freed, allowing them to more effectively accomplish their missions.

Established in 1993, StarSoft Technologies, Inc. is a privately held corporation. Headquartered in Spokane, WA, StarSoft has clients throughout the United States and Canada.
